

Sri Lahari Sivanvitha Nori

Software Engineer | Full-Stack Developer

Bengaluru | sreelusivani07@gmail.com | linkedin.com/in/nori-srilahari | github.com/srilahari-nori

PROFESSIONAL SUMMARY

Software Engineer with production experience at JPMorgan Chase and Co., building and maintaining an enterprise real estate operations platform used across 8,000+ transactions annually. Full-stack background across React, Angular, Java/Spring Boot, and Python/FastAPI, with hands-on ownership of REST API design, E2E testing, and Agile delivery. Two-time JPMC Global Excellence Award recipient.

TECHNICAL SKILLS

Frontend: React.js, Redux, Hooks, Angular (Standalone Components, Signals), JavaScript, TypeScript, JEST, Vitest, Figma (UI/UX)

Backend: Java, Spring Boot, Hibernate, REST API Design, Python, FastAPI, Pydantic, SQLAlchemy

Data & DevOps: MySQL, PostgreSQL, SQLite, SONAR, Splunk, AWS CloudWatch, Spinnaker, Databricks Fundamentals

PROFESSIONAL EXPERIENCE

Software Engineer I | JPMorgan Chase & Co.

June 2023 – February 2026

Real Estate Operations Platform — Enterprise B2B internal workflow application

- Contributed as a full-stack developer of an internal real estate operations platform processing 8,000+ property transactions annually — built React interfaces and Java REST APIs that replaced manual analyst workflows with automated, auditable processes, significantly reducing operational effort.
- Spearheaded project-wide SONAR code quality resolution and owned the E2E testing lifecycle, using Splunk and AWS CloudWatch to monitor production issues and resolving all high-priority bugs within a 24-hour SLA.
- Stepped up to own Agile ceremonies for 1 year when the team had no dedicated Scrum Master — facilitated sprint planning, retrospectives, and stakeholder delivery while remaining a full-time IC.
- Mentored 1 intern and 3 junior developers on React, Java best practices, and CI/CD pipelines; guided SRE members on system architecture.
- Translated continuous client feedback into high-impact UI/UX feature improvements, directly influencing platform direction.

Software Engineer Intern | JPMorgan Chase & Co.

February 2023 – May 2023

- Transitioned from an ML academic background into production full-stack development, independently ramping up on React.js and shipping UI components into the live application within the first sprint.
- Built production-ready screens from Figma design mockups integrated directly into the live application.

PROJECTS

Scrum & Technical Debt Tracker (React 19 / FastAPI / PostgreSQL)

- Built a Scrum tooling app for logging and tracking technical debt, with a workflow that generates structured user stories with acceptance criteria from plain-language feature descriptions.
- Migrated the backend from Java/Spring Boot to Python/FastAPI, redesigning the data model and REST API from scratch while preserving all original functionality.
- Built a query panel that surfaces prioritization insights (e.g., what to tackle first) grounded in live technical-debt data pulled directly from PostgreSQL.
- Hardened configuration by removing hardcoded database credentials and a partially-committed API key in favor of environment-variable-driven config.

Job Application Tracker (Angular 21 / FastAPI / SQLite)

- Built a full-stack job application tracker (Angular + FastAPI) with status-pipeline tracking, follow-up deadline alerts, and a dashboard summarizing total/active applications and overdue follow-ups.
- Implemented a signal-based reactive store in Angular so the dashboard, list, and add/edit form stay in sync automatically without manual event wiring between components.
- Designed a REST API in FastAPI with Pydantic-validated enums for status/priority, full CRUD, filtering, sorting, and search.
- Migrated the database layer from MySQL with hardcoded credentials to a zero-config SQLite setup, and added test coverage across both frontend (Vitest) and backend (automated endpoint verification).

AWARDS & RECOGNITION

- Global Excellence Award — Customer/Client Experience (JPMC): recognized for high-quality, user-centric real estate platform features.
- Global Excellence Award — Teamwork & Partnership (JPMC): recognized for cross-functional leadership and collaboration.
- Location Excellence Award (Oct 2025): led 4,000+ member internal tech community, delivering 50+ sessions.
- Mountain Mover Team Grammy: awarded for overcoming complex project delivery challenges as a team.
- Code for Good Organizing Committee: guided 500+ students at JPMC's global hackathon.
- CodeForGood Hackathon Runner-Up (June 2022): built a prototype web platform for NGO Srujna Charitable Trust.

CERTIFICATIONS

Databricks Fundamentals | Deloitte Australia Data Analytics | HackerRank: Java, Python, SQL, Problem Solving

EDUCATION

B.Tech, Computer Science — AI & ML Specialization | SRM University, Amaravati | CGPA: 8.65/10 | 2023
